

Access to the full results in Excel

After running the simulation model of a project, the results of design model, simulation model and financial model will be recorded in an Excel file (.xls). The file can be accessed through:

C:\DOE\DOE_CSP_PROJECT\SAM_flatJSON\
XLS results\'Project_name_output_simulation_timestamp.xls"

For the results of parametric studies, a separate Excel file will be saved in the above folder in a sequence of timestamp. From the oldest to the latest file, results are stored from the Min. to the Max. of the target variable.
